| <p>The email is made of random letters “76tguyhh6tgftrt7tg.su”, the subject has huge spelling mistakes, the name of the sender is trying to look important. The email itself has spelling mistakes, the name added at the bottom “Clyde West” does not match the email or the sender’s name “Def Communications”. The attachment file is password protected and the password is stated in the email for “security reasons”, and it has been opened and downloaded on the device. The email was received at 9:30 am. Upon previously investigating the file I have confirmed that the file is malicious and the alert, whose severity has been reported as medium, should be escalated to a level 2 SOC analyst and further action should be taken.</p> |
